Treatment of cancer

part and directly sent to pathology laboratory, check whether the part is affected by cancer or not. After the suggestion is sent from the laboratory the physician does their treatment according to their stage of cancer. Treatment: The active treatment of cancer they need a best involvement and coordination for every treatment. The most important is that surgery is not a good result for a patient. Cancer is diagnosed, through the blood, cancer cells are suppose to spread allover the part of the body, if it is spreading cancer. Cancer treatment needs some therapy treatment they are chemotherapy, radiation and hormonal therapy if it is necessary. Chemotherapy: Chemotherapy is a one of the treatment that made up of drugs to kill cancer cells. Chemotherapy had a consist of single drugs or blend of drugs they bid the medicine according to their stage of cancer. Chemotherapy is totally varies from surgery, because in that cancer-fighting drugs is use to prevent the cancer whether it is spread to every parts of the body or blood. Many of the people diagnosed with cancer can receive the chemotherapy. Millions of people affected with cancers they can receive the chemotherapy treatment. Chemotherapy is very easy way to prevent the cancer. Hormonal Therapy: Hormones are generally emotive part in the body that will grown because hormone in sensitive tissues, such as breast gland. When cancer on breast part it will occur all over part of the body with own hormones. Hormone therapy are the best way to prevent the cancer but its used take away the secrete hormones such as ovaries or testicles. Hormonal Therapy analogous to chemotherapy. But its systematic treatment is used to clear the cancer cells all over the body. Radiation Therapy: Radiation therapy is a main part to harm the DNA cancer cell and is used to avoid the growing and reproduction of cancer cells. When cancer cells died and the cancer are supposed to disappear. The main advantage of Radiation therapy is uses to destroy the cancer cells and improve the cure of cancer and reduce the side effects of cancer. Radiation therapy may possibly used for reducing the symptoms under the medical condition. Radiation is typically organized in the way high-energy mean radiation gave a heavy dose where the cancer cells are performed. Radiation can kill the cancer cells in the location part of the body if they continue is not easy to destroy the cancer cells. Targeted Therapy: A targeted therapy is one of the therapy treatments that is use to treat just cancer cells and reduce the harm cells whether it's normal, healthy cells.
