

Halloween Face Painting Designs: Ghost, Pumpkin, Candy Corn

When Halloween approaches, you know that face painting season is kicking into high gear. Try these easy, but immensely child-pleasing Halloween "cheek art" designs at class parties, fall festivals and homecoming carnivals.

Begin with good quality, water-based face paints. You can find them online or in some theatrical stores. A palette of six, good-quality face paints is priced around \$12.00 and includes enough paint for 70 or more cheek art designs. Water-based face paints apply as easily as watercolors and remove cleanly with a paper towel and water.

For a small gathering of children, two or three small to medium sized paint brushes will be sufficient. A bowl of water to rinse the brushes and a roll of paper towels conclude the list of basic supplies.

In my opinion, the simplest design to paint is that of a ghost. The basic shape of the ghost is that of a triangle. With a brush loaded with white paint, paint a loose triangle by creating a wavy line to outline the ghost. Fill in with more white paint, dot on black eyes and a smile and the ghost is complete.

Nothing is "sweeter" than a face dotted with painted candy corn. The basic shape is a pyramid, with yellow on the bottom third, orange on the middle third and white at the peak. You can create a candy corn crown by painting the candies in succession along the forehead.

To paint a jack-o-lantern, begin with a circle or oval of orange paint. When the orange paint dries, add small triangles in black paint for the eyes and nose and paint a toothy smile in black as well. Add a green stem and your jack-o-lantern is complete.

The most important thing to remember when face painting is to have fun and keep it simple! Children aren't expecting a Picasso to be painted on their face. They simply love to celebrate the occasion and face painting is the perfect way to light up the face of any child.
