

Future of Conference Calls

No other event has helped the expansion of communication and businesses as much as the coming of conference call technology. The concept of conference call was developed in order to fulfil the requirement of long distance communication over multiple locations. Today, when business process outsourcing and globalization of businesses are the buzz words of world economy, conference calls have become more and more important as people who work together need to communicate and collaborate in real time for decision making, research and development and strategy formation. This means that conference call is going to expand its horizons more and more. Even today it's being utilized in activities like public development and distance education. In future conference call will be focussing on improvements in three major sectors. First of all the "total cost of ownership" of conference call infrastructure will go down. It is the future of a conference call that it become widespread and available to all those who need it at affordable prices. The total cost of ownership of a future conference call system as well as the future conference call service will be significantly lower as compared to today because of easy availability and mass production of equipments and better communication infrastructures. The future of conference call is one where it will be available for mass usage at vary affordable prices. With the advancement of technology, the other factor in the future of conference call will be the high quality of equipment and service. The voice clarity will improve as well as the reliability of conference call set up will increase. With more and more people investing and using conference call facilities, it shall be necessary for future conference call providers to provide quality products with good after sales and technical support. With the market thrown open for telecom majors to invest in future conference call facilities, the hardware as well as service of future conference call will definitely be of very high quality. Thirdly with the improvements in services and hardware for conference call, all the future conference call will be very secure with on-board high level encryption and end to end scrambling of voice with integrated data and video circuits available on demand. This will ensure that all your information and communications are safe and reach the desired person intact and as fast as possible. Future of conference call resides in permanent availability even through using cell phones and computers and traditional telecommunication channels. In fact future of conference call resides in efficient and unstopped availability, where it will be the ultimate example of convergence of technology.
