

Online College Degree Programs

Although numerous criticisms have been made against online college degree programs, claiming that traditional college degree programs will always be better than existing online college degree programs, various extensive research and studies backed by Thomas Russel's "The No Significant Difference Phenomenon" emphasize that there is no significant difference between college degrees earned online versus their traditional counterpart. At present, online college degree programs are available that cater to all aspects of learning. Schools, colleges, and universities also currently offer online associate or master's degrees through online course program offerings. Depending on the learner's choice of college degree program or his/her choice of school, all college degree programs offered traditionally may now be available online. College degrees in business in the areas of accounting, administration, e-Business, management, marketing, finance, information systems, public administration, and retail management are available. There are also college degrees in legal management and criminal justice administration available. College degrees in humanities and liberal arts, including sociology, philosophy, communications, psychology and human services management are also offered. Natural science and applied sciences, such as nursing, pharmacy, biology, medical studies, physics, math, and chemistry are also offered. One of the more popular college course programs offered online is information technology, which includes computer sciences, visual communications, information management, network administration, programming, and computer systems. Education programs are also available that may range from basic teacher-training modules to more specialized college courses. Admission requirements to any of the chosen online college degree programs are subject to evaluation of eligibility, college level completion, or even certifications. For those who are starting college, a high school diploma or its equivalent is a basic requirement. Those who wish to finish their college education online and have already spent some time in college may submit their school records for evaluation as to which courses to take. Those who just wish to gain extra credits should present their diplomas and certifications for eligibility.

About the Author

As community healthcare leaders strongly committed to providing quality care and counseling, independent retail pharmacies such as yours are positioned.
