

## Massage Therapy Gift Certificates

Massage therapy is a hands-on manipulation of the soft tissue and joints of the body. The soft tissues consist of muscle, skin, tendons, ligaments and joint capsules. An effective massage has numerous physiological effects, which are mainly due to the therapist's hands moving over the body in a standard and scientific manner. The efficient movements can physically stretch muscles, ligaments, tendons, and encourage the circulation through the tissue. It reduces muscular spasms and can prove to be either sedating or stimulating to the nervous system. A good massage affects all the systems of the body - in particular, the muscular, circulatory, lymphatic (immune) and nervous systems. Apart from medical ailments a massage also helps in soothing the mind and calming the body after an increased workload and hectic schedule. Due to intense competition and stress on the professional and domestic front people face a lot of physical and mental trauma. Massages help in reducing this trauma. It relaxes the person and regenerates the body and mind. Certain massages also help in the process of beautification. This occurs due to an increase in the blood circulation, which automatically rejuvenates the dead blood cells and brings about a healthy glow. Massages also form an alternate to allopathic medical treatment. People suffering from various ailments prefer this form of treatment due to the lack of adverse side effects and complications. Massage therapy gift certificates prove to be a welcome change compared to the traditional materialistic gifts. It proves to be ideal gift for people who are under constant work pressure, as it gives them a chance to unwind and relax. Various massage centers are finding an increased demand for such gift certificates. A massage therapy tends to form a universal gift, which can be presented on any occasion. Customized massage gift certificates generally appeal to a majority of people. It is a pleasurable experience that is enjoyed by all.

## About the Author

Tumors in the head region, which up to the present have not been treatable with conventional therapy methods, are irradiated by accelerated.
