How to train a dog that has behavior problems?

Do you have a dog that has behavior problems such as excessive biting, barking, and whining? Do you have a dog that is overly aggressive? Do you want to know how to fix any dog behavior problem?

It's never too early or too late to train a dog. If you have just brought a puppy, then puppy training is great, the younger the better! But whatever the age of your dog, you can teach him to obey your command.

As dog owners we have a responsibility to control our dogs. They must be well behaved around people and other dogs. They should not be loud, excessive barking must be controlled. An uncontrollable dog is only going to lead to problems.

Dog behavior problems can be solved with obedience training. Obedience training is training your dog to perform certain acceptable behaviors while teaching them to stop unacceptable behaviors. Dogs are generally intelligent creatures and learn very quickly. The most important points to remember before embarking on the process of training your dog are that you must provide patience and consistency.

Learning to communicate with your dog in a way it understands is probably the hardest part. Start with one-word or two-word commands. Dogs will quickly pick up on the sound of the command and associate it with the desired behavior. Most trainers recommend using treats and praise when the dog demonstrates the desired behavior.

Reward your dog when he does something right and a short, sharp reprimand with your voice when they do wrong. You should never hit or spank your dog; this can only lead to more problems

Lastly, always keep the training fun for both you and your dog.
