

West Lake Medical Center plans move

LAURIE - The largest medical clinic on the lake's west side will be moving.

It may be at least a few years down the road, but plans to relocate the West Lake Medical Center are underway.

Land a 1/4-mile down Route O has been purchased to build a new 6,000-square-foot facility, but it may be 2009 before the ground breaking takes place, according to Jeff Robbins, operating manager for Lake Medical Group LLC.

The new clinic building will be a partnership between Dr. Kathline Robbins and Dr. Brian Knopf. Dr. Kenneth Derrington will continue to be a part of the practice.

'We are committed to providing primary care services and continue the tradition of good quality care,' Robbins said. 'The physicians are upgrading the facility and making a commitment to bring more services to this side eventually.'

About a third of the building will remain unfinished to provide an area for future expansion. The office will have enough room for up to five physicians.

The West Lake Medical Center focuses on primary care, but also offers cardiology services and is equipped with a trauma room.

Derrington and Knopf are family practitioners, Robbins specializes in internal medicine.

The West Lake Medical Center has been providing health care to the lake area for 15 years.

Foreign scholars believe that honey can improve blood vessel wall composition and nutrition, increase blood vessel flexibility, protection and promotion of cardiac function. Scientists study shows that honey can work uninterrupted compensation myocardial energy consumption, it also enables cardiovascular expansion, improved coronary blood circulation, coronary blood flow to normal. What is more important is the presence of trace honey acetylcholine type substances, it has a good heart disease treatment. Medical experts suggested that people with serious coronary heart disease should take 25-50 g honey every day, taking 30-60 consecutive days, there will be significant effects.

About the Author
