

Carnivorous Plant Expert with Expert Village.com

March 29, 2008

(WTNH) - Contrary to some Sci-Fi movies, there are no Carnivorous plants, capable of trapping people. So, while there are no Man-Eaters! You'll be happy to know most of these plants live on a diet of insects. And here to tell us more is Carnivorous Plant Expert Richard Revis with Expert Village.com

Information provided by our guest:

Venus Fly Trap - Most famous of all carnivorous plants, most active in trapping prey, easy to watch the whole process of capture and digestion. Easy to grow under proper conditions

Purple Pitcher Plant - A native species of carnivorous plant. Can be seen in bog habitats throughout the Northeast, extending up into Canada.

Tropical Pitcher Plant - *Nepenthes* species. Exotic carnivorous plant found throughout the Asian tropics. Some species can produce traps as large as 2-Liter soda bottles. Fantastically colored pitchers with many unusual attributes, i.e. fangs, hooks, etc.

ExpertVillage.com, the world's largest how-to video Website. Learn more about plants, flowers and herbs to help make your garden beautiful. Welcome to Equilibrio Carnivorous Plants

Dear Customer, We are a grower specializing in rare unusual carnivorous plants. Currently, we distribute plants within the USA only. We do our best to maintain a stock of 150 plant species and varieties of carnivorous plants from all the existing genera. At this time we have grown half of the carnivorous plants that we have for sale and the other half are imported from major nurseries all over the world. All of our suppliers are top producers of plants. We appreciate your business and encourage you to email us with any questions you may have. And remember, proceeds from your purchase go towards the production of a documentary on carnivorous plants. NOTE: Orders placed after August 30, 2007 will be shipped in Summer 2008. Read more...
