

## Central Service Technician Schools for an Exciting Medical Career

Central Service Technician Schools, colleges, and universities prepare students for providing assistance to health care managers, physicians, nurses, therapists and other specialists to ensure that excellent care is given to patients. Instruction for earning diplomas and certificates as central service technicians includes an introduction to the role of central service, surgical supplies, surgical instruments, sterilization, and packing procedures. Central service technicians must be organized and methodical, and understand principles, procedures, and skills to maintain quality in processes for maintaining medical products that are sterilized, processed, and packaged, in hospitals and surgical centers. These products include thermometers, bandages, and surgical instruments used in surgical rooms, emergency rooms, outpatient clinics, and in patient rooms. Central Service Technician Schools often provide hands-on classroom and laboratory exercises and clinical externships in outside facilities that prepare students with knowledge for performance of the highest quality. Students in Central Service Technician Schools should anticipate learning the essentials of surgical instrumentation, decontamination techniques, sterilization processes, managing supplies, safety practices, and safety standards. Required skills of central service technicians are manual dexterity, for handling equipment and performing functions quickly and accurately, and communication skills, for interacting clearly and precisely with nursing and surgical staff. Central Service Technician Schools provide students interested in medical careers an excellent means to begin. Central service technician responsibilities include detailed knowledge of operating rooms and operating room procedures, sterilization and packaging skills, decontamination processes, and medical supplies and equipment used to provide patient care. Central service technicians can look forward opportunities in hospitals, outpatient surgical centers, and clinics. Responsibilities will generally include sterilization processes, managing central supplies, organization of instrument storage areas, and of distribution department procedures. Central service technician incomes can range as broadly as \$16,000 for entry-level positions to \$50,000 for degreed, experienced technicians.
